Election/Restrictions

Applicant's election with traverse of **claims 9-20** in the reply filed on July 1, 2004 is acknowledged. The traversal is on the ground(s) that searching in Class 604 would not be a burden for the examiner. This is not found persuasive because class 604 includes hundreds of subclasses with each subclass containing hundreds of patents. Accordingly, in order to provide an adequate prosecution of this application, the requirement is still deemed proper and is therefore made FINAL.

Claims 1-8 and 21-27 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on July 1, 2004.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Larsen, et al., in view of Funderburk, et al., and Teissen-Simony. The Larsen, et al., Patent discloses a cannula housing, a cannula extending from the cavity, a retaining body secured within the cavity and in cooperation with the internal surface to locate the flange within the cavity, and a needle holder. The Larsen, et al., Patent does not disclose a guide extending from the cannula. However, the use of guides extending

from cannulas is conventional in the art as evidenced by the teachings of Funderburk, et al. In figure 4, this patent shows a guide extending from a cannula and cooperating with a guide sleeve to position the connecting needle into a passage. Based on the observations made above, for a person of ordinary skill in the art, modifying the injection set disclosed by Larsen, et al., with a guide extending from the cannula would have been considered an obvious design choice.

Page 3

The examiner has also included the Teissen-Simony Patent in this rejection to further prove the conventionality of guides in infusion sets. Importantly, figure 8 shows guides (15,16) extending from a cannula to guide the connecting needle. Again, because of the conventionality of the guide configuration, for a person of ordinary skill in the art, modifying the injection set disclosed by Larsen, et al., with a guide extending from the cannula would have been considered an obvious design choice.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel Mendez whose telephone number is 703-308-2221. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Brian Casler can be reached on 703-308-3552. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
